

Dear Hiring Manager,

I am a software engineer with a strong talent for identifying the least complex solution that still exceeds product requirements—driving outcomes that balance technical excellence, speed, and long-term maintainability. I'm motivated by building systems that are not only correct, but clear, scalable, and aligned with real user and business needs.

I work exceptionally well in cross-functional environments, collaborating closely with product managers, designers, and stakeholders to translate ambiguous problems into well-defined, high-impact solutions. I'm comfortable communicating at all levels of technical depth, whether that means discussing system architecture with engineers or explaining tradeoffs and timelines to non-technical partners.

I thrive in ambiguity and enjoy the process of turning uncertainty into clarity. I'm proactive about learning new tools, patterns, and technologies, and I continuously invest in my own growth to stay effective in fast-moving environments. I take pride in ownership, thoughtful decision-making, and delivering work that others can build on with confidence.

I would welcome the opportunity to bring this mindset and skill set to your team and contribute to building high-quality software that delivers meaningful value.

Sincerely,  
Brendan Hoskins
